▲ upper bound in part

Daventry holds nearly half the network's inventory

Average inventory by site, 2025

...but Bristol, holding the least, serves worst

Order lines not supplied in full by site, 2025

£2.0m of inventory and a 7.71% line-fill failure are happening at the same time, at the same sites. This is an **allocation and replenishment-design** problem, not an overstock or understock problem. Settings track where demand has been, not where it is going: rising-demand lines sit at 0.68 of the network's own working rule and falling-demand lines at 1.33. Separately, supplier minimums — not replenishment decisions — set the order quantity on 98.3% of importer purchase lines.

Nearly half the estate has no case against it

Tier 2 holds £416,075 of stock but only £303,558 is claimable, and that is an upper bound.

Mechanism	Positions	Stock Value	Working capital (£)
1 — discontinued or obsolete exposure	25	£87,478	
2 — importer and minimum-order structural stock	148	£416,075	
3 — above the calibrated replenishment requirement	125	£357,897	
4 — slow-moving residual	8	£14,272	
5 — no identified opportunity at all	10	£252,435	

£468,897 is identified, not available. Counted once across five mutually exclusive tiers; three of the four active tiers are upper bounds. **48.8% of the estate has no identified opportunity at all.** £252,435 — 53.8% — sits at two sites with unresolved service anomalies, where no broad inventory reduction is recommended. Capital released is one-off; holding cost saved is annual; they are never added.

Daventry holds half the network's capital

Average inventory (£)

Heating and Tools turn slowest

opportunity_mechanism	Positions	Stock Value at Closing	Working capital (£ one-off)
⊕ 2 — importer and minimum-order structural stock	148	£416,075	£303,558
⊕ 1 — discontinued or obsolete exposure	25	£87,478	£87,478
⊕ 3 — above the calibrated replenishment requirement	125	£357,897	£70,755
⊕ 4 — slow-moving residual	8	£14,373	£7,106
Total	515	£1,711,042	£468,897

The same pounds, counted five times

Sum of Value by Exposure

Of the £123,373 of slow-moving stock measured in file 03, only **£14,373 across 8 positions** survives as an unexplained residual once stronger mechanisms take precedence. £23,725 is discontinued · £34,954 is minimum-order structural · £50,321 sits above the calibrated rule.
